Setup Wizard

The DI-624 is a Wireless Broadband Router ideal for home networking and small business networking. The setup wizard will guide you to configure the DI-624 to connect to your ISP (Internet Service Provider). The DI-624's easy setup will allow you to have Internet access within minutes. Please follow the setup wizard step by step to configure the DI-624.

**Wireless Performance**

These are the Wireless Performance features for the AP(Access Point) Portion.

TX Rate : Auto ▼ (Mbps)

Transmit Power : 100% ▼

Beacon interval : 100 (msec, range:20~1000, default:100)

RTS Threshold : 2346 (range: 1~2346, default:2346)

Fragmentation : 2346 (range: 256~2346, default:2346, even number only)

DTIM interval : 1 (range: 1~255, default:1)

Preamble Type : ⦿ Short Preamble ◯ Long Preamble

SSID Broadcast : ⦿ Enabled ◯ Disabled

802.11g Only Mode : ◯ Enabled ⦿ Disabled

CTS Mode : ◯ None ◯ Always ⦿ Auto

Super G Mode : Super G with Dynamic Turbo ▼

Disabled
Super G without Turbo
Super G with Dynamic Turbo
Super G with Static Turbo

Firmware Upgrade

There may be new firmware for your DI-624 to improve functionality and performance.
Click here to check for an upgrade on our support site.

To upgrade the firmware, locate the upgrade file on the local hard drive with the Browse button. Once you have found the file to be used, click the Apply button below to start the firmware upgrade.

**Current Firmware Version: 1.29**
**Firmware Date: Thu, 25 Dec 2003**

**Ping Test**
Ping Test is used to send "Ping" packets to test if a computer is on the Internet.

Host Name or IP address   [                    ]   [ Ping ]

**Restart Device**
Reboots the DI-624.

[ Reboot ]

**Block WAN Ping**
When you "Block WAN Ping", you are causing the public WAN IP address on the DI-624 to not respond to ping commands. Pinging public WAN IP addresses is a common method used by hackers to test whether your WAN IP address is valid.

Discard PING from WAN side   ○ Enabled   ⦿ Disabled

## FAQs

**Super G**
Super G is a group of performance enhancement features that increase end user application throughput in an 802.11g network. Super G is backwards compatible to standard 802.11g devices. For top performance, all wireless devices on the network should be Super G capable. Select either Disabled, Super G without Turbo, Super G with Dynamic Turbo, or Super G with Static Turbo.

*Disabled* - Standard 802.11g support, no enhanced capabilities.
*Super G without Turbo* - Capable of Packet Bursting, FastFrames, Compression, and no Turbo mode.
*Super G with Dynamic Turbo* - Capable of Packet Bursting, FastFrames, Compression, and Dynamic Turbo. This setting is backwards compatible with non-Turbo (legacy) devices. Dynamic Turbo mode is only enabled when all devices on the wireless network are Super G with Dynamic Turbo enabled.
*Super G with Static Turbo* - Capable of Packet Bursting, FastFrames, Compression, and Static Turbo. This setting is not backwards compatible with non-Turbo (legacy) devices. Static turbo mode is always on and is only enabled when all devices on the wireless network are Super G with Static Turbo enabled.
