

WIRELESS G

Login to the Web Configuration

This document will detail how to gain access to the Web Configuration on the DIR-300.

Gaining access to the Web Configuration can allow you to unleash the full potential of the DIR-300 allowing access to all configuration options.

1. To allow login to the Web Configuration, first you will need a computer/laptop to be connected to one of the LAN Ethernet ports.

2. Proceed to open an Internet Browser and in the address bar, type in http://192.168.0.1

Done		h.

NOTE: The default username is admin and the password is left blank. Proceed to login.

3. You have successfully gained access to the Web Configuration.

Note: This can also be completed using an Wireless connection however it is not recommended to change the wireless aspects unless you are connected using the Ethernet LAN ports.

IMPORTANT:

Please remember to ensure your DIR-300 has the most current firmware version applied. To apply this firmware please refer to the Technical Support Knowledge Base.
