Here is a guide to upgrading the DWR-116 with the firmware DWR-116-A2-V1.06(EU)b03-2017-04-20

This firmware is used to make the DWR-116 compatible with dongles like the DWM-157 C1. This guide is in case the router goes into recovery mode while trying to upload the new firmware.

Step 1

Login to the router with the IP address of 192.168.0.1

## Step 2

Navigate to "Tools" and then "Firmware" on the left.

Choose the file "DWR-116-A2-V1.06(EU)b03-2017-04-20.bin" and click upgrade.

Step 3

If device goes into recovery mode, here is how to recover. You will know the device is in recovery mode when all the LAN ports are rapidly flashing. If the device did not go into recovery mode you can skip to Step 4.

Change your IP address to 192.168.123.10 /255.255.255.0 and go to the website http://192.168.123.254

Choose the same file "DWR-116-A2-V1.06(EU)b03-2017-04-20.bin" and upload in again.

Afterward turn off the router and back on again.

Step 4

Login to router using 192.168.0.1 and navigate to "Tools" and "System" on the left.

Reset the router to default.

Step 5

The router should now be compatible with dongles like the DWM-157.
